

RAPS System Requirements

Server

Windows

- 1 GHz or faster CPU
- 512 MB RAM, plus an additional 512 MB for every 20-30 workstations (minimum 1 GB)
- 1 GB of free hard drive space
- Windows 2000 and above. (Windows XP Home Edition is not supported.)
- A Windows Server version is required if more than 10 workstations are to be using the program at the same time.

Note: Non-dedicated server would require at least 1.5 GB RAM and a 2 GHz processor. More RAM, processing power and/or processors may be required, depending on what else is running and how heavily used the server is.

Workstation

Windows

CPU	1Ghz (or better)
RAM	256 MB
Operating System	Windows Millennium or newer
HD Free Space	1 gigabyte (GB)

Recommended: Printer; Headphones (strongly recommended)

Optional: Printer; Microphone

Note: If a computer is using both on-board sound and on-board video (that is, both are built on to the motherboard), there may be performance issues in the program. Specifically, the picture and audio portions of the videos used by the program may become unsynchronized. It may not be possible to fix this issue as long as the computer is using either or both of the sound/video devices.

Note: If RAPS (program and database) is only going to be installed on one computer, then only the Workstation requirements would apply.
